EDUCATION:

UC Berkeley | Dec 2021
EECS & Mechancial Engineering

COURSEWORK:

Stanford Machine Learning
Self-Driving Decal
CS C100 - Principles of Data Science
CS 70 - Discrete Math & Probability
CS 61B - Data Structures
CS 61C - Computer Architecture
MATH 54 - Linear Algebra
ME 100 - Electronics for IoT
E 26 - 3 Dimensional Design

LANGUAGES:

Python, Java/C/C++, JavaScript,
MATLAB, Swift, CSS /HTML, SQL

TECHNOLOGIES:

OpenCV / Google Vision API
Tensorflow / Keras / PyTorch
Jupyter Notebook / Colab
NumPy / GraphQL
React.js / Gatsby
Firebase / MongoDB
Solidworks / Fusion 360
Adobe Design Suite / Figma
3D Printing / CNC Machining

JUST FOR FUN

Fellow @ Rewriting the Code
Graphic Designer @ Innovative Design
Samsung UVenture Top 10 Finalist

INTERESTS:

Robotics, Artificial Intelligence,
Transformative Product Design,
Graphic Design, Architecture
Swimming, Baking Cookies!

EXPERIENCES

ACADEMIC INTERN : Berkeley EECS Department | since Feb 2020

- Reinforcing concepts such as **git**, **hashing** and **sorting algorithms** for students in Data Structures, through assisting with lab and homework assignments

CHASSIS ENGINEER : Berkeley Formula Electric | since Jan 2020

- Designed cooling system within the accumulator casing to safely contain and protect battery modules from external heat, water, and collisions
- Researched and modelled a steering wheel design in **Fusion 360**, while optimizing weight, durability, driver controls and ergonomics
- Built an adjustable rig from 80/20 for seat testing and spaceframe constraints

MECHANICAL ENGINEERING INTERN : Arris Composites | May 2019 - May 2020

- Programmed a movement seqenuce for **FANUC Robotic arms** in **KAREL** which is a crucial component of the MVP cell, and used to speed up future R&D testing
- Conducted cell testing to ensure perfect program integration into the system, interface, and PLC
- Prototyped and 3D printed multiple designs of a modular tape dispenser for handling fragile material of various carbon fibre compositions
- Designed various mechanical components in **Solidworks** within manufacturing cells which had functions of heat protection, ventilation, and stabilization

UNDERGRADUATE RESEARCHER : Berkeley BEST Lab | Aug 2019 - Jan 2020

- Prototyped spherical tensegrity robots for space exploration and disaster relief in collaboration with NASA and Squishy Robotics
- Developed a system with **Arduino** and force sensors to collect testing results that could reflect the impact force on both the robot and the impact surface

PROJECTS

CULINARY SOCIAL MEDIA PLATFORM - OM NOM | Hack:now - Ongoing

- Created a platform for sharing and discovering recipes, chefs and resturants
- Uses **OpenCV** and **Swift** to identify available ingrdients through mobile cameras
- Web platform developed with **React.js**, **Material UI**, and **MongoDB Atlas**

LEGACY | Early 2020

- Created an Income Share Agreement platform that connects alumni to students to support their studies and future potentials both financially and experientially
- Branded through logo design, color palette selection & graphics illustration
- Wireframed with **Adobe XD**, build with **React.js**, and deployed with **Firebase**
- Finalist of the Berkeley Big Ideas Competition + YC start-up school participant
- take a look and visit : joinlegacy.io

CONTROLLABLE COLOR CHANGING LIGHT SYSTEM | Late 2019

- Connected the ESP32, light, temperature and humidity sensors to communicate through Wi-Fi and control multiple LED light strips
- Programmed in **Python**
